Search Notes

Dear Examiner Rutten,

Attached please find the results of your search request for application 09/688268. I searched Dialog's patent files, technical databases and general files; along with the Internet.

Please let me know if you have any questions.

Regards,

Geoffrey St. Leger
4B31/x23540

STIC EIC 2100 164006

Is this a "Fast & Focused" Search Request? (Circle One) YES NO

A "Fast & Focused" Search is completed in 2-3 hours (maximum). The search must be on a very specific topic and meet certain criteria. The criteria are posted in EIC2100 and on the EIC2100 NPL Web Page at <http://ptoweb/patents/stic/stic-tc2100.htm>.

What is the topic, novelty, motivation, utility, or other specific details defining the desired focus of this search? Please include the concepts, synonyms, keywords, acronyms, definitions, strategies, and anything else that helps to describe the topic. Please attach a copy of the abstract, background, brief summary, pertinent claims and any citations of relevant art you have found.

Microcode, or firmware, is software that controls the low-level processes of computer hardware. This software is permanently stored on a computer chip inside computing devices. Occasional bugs in the firmware require updates. Updating the firmware can occur by exchanging the chips, or by reprogramming them through an interface of the device.

The claims call for updating the microcode of a printer by embedding the update in a print job submitted by a computer.

The closest art I could find does not beat the filing date: US 2004/0120001 A1 by Boldon

 January 1977 **Proceedings of the 3rd workshop on Computer architecture : Non-numeric processing**, Volume 6 , 9 , 12 Issue 2 , 2 , 1

Full text available: pdf(787.60 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Input-output subsystem architectures have evolved over the past 20-odd years to the point where two divergent approaches have found acceptance in current computer systems; the 'IBM channel' is the archetype of the lower level alternative, while the functionally more complex techniques involve a wide spectrum of distributed processor architectures supporting database and/or storage management functions independently with respect to the central processor. The paper traces the historical devel ...

 September 1971 **ACM Computing Surveys (CSUR)**, Volume 3 Issue 3

 Full text available: pdf(1.91 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper is a survey of current methods for the on-line creation and editing of computer programs and of ordinary manuscripts text. The characteristics of on-line editing systems are examined and examples of various implementations are described in three categories: program editors, text editors, and terminals with local editing facilities.

Raymond M. Bryant

 March 1981 **Proceedings of the 14th annual symposium on Simulation**

 Full text available: pdf(899.48 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

SIMPAS [1] is a discrete system simulation language based on PASCAL. UCSD PASCAL [6] is a PASCAL-based operating system designed for microcomputer use. Micro-SIMPAS is a version of SIMPAS which runs under UCSD PASCAL. This paper discusses the conversion of an existing SIMPAS implementation into Micro-SIMPAS, and discusses our experience in using Micro-SIMPAS for the construction of some simple simulations. We also discuss new features of Micro-SIMPAS for the interactive display of simulation ...
